
Total Model Parameters: 1,054 (Conv1: 152, Conv2: 876, Linear: 26).

2D Convolution Mechanics: $(I * K)(u, v) = \sum_{c=0}^{1} \sum_{i=-1}^{1} \sum_{j=-1}^{1} I_c(u+i, v+j) \cdot K_c(i, j) + b$

The 2 input channels allow learned kernels to compute spatial cross-correlation between dual patches.
